

ChunkBench: How Chunk Size Affects Retrieval

C. Placeholder (fictional)

FICTIONAL TEST DOCUMENT - generated for the workshop; not a real paper.

Abstract

We measure how the size of text chunks changes retrieval quality in a RAG system. The full results are in Table 2 on the next page.

1 Setup

We split 300 machine-learning papers into chunks of three sizes, embedded them with one embedding model and asked 500 questions with known answers.

Table 2: Retrieval accuracy (recall@5) by chunk size

Chunk size	Recall@5	Index size
200 chars	61%	1.9 GB
800 chars	74%	0.6 GB
2000 chars	66%	0.3 GB
